Workers: the Mechanism of Thinking

Poster Design

A2, 2021

This is a moving poster for an art exhibition, *Workers: the Mechanism of Thinking* which explores the data processing mechanisms of computers and humans. Graphic motifs were taken from the hardware elements of a computer. In the poster, the particles symbolizing data move from the bottom to the top. You can see it via the link below.

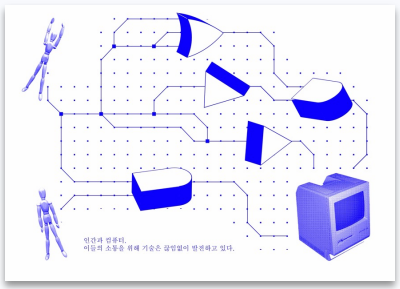
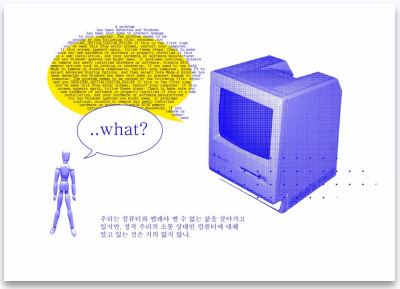
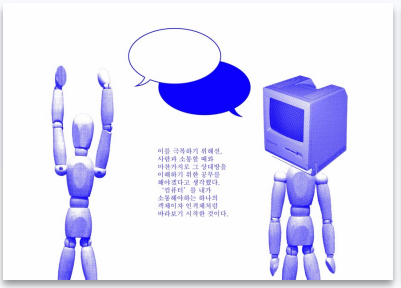
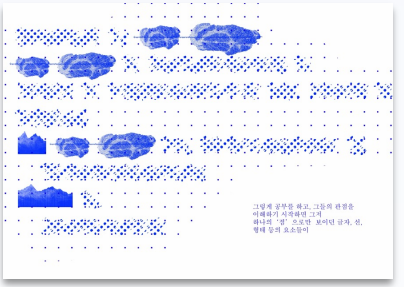
I studied the basics of web programming, learning HTML and CSS in 2021. I had to practice computational thinking to make something by coding. Whenever facing difficulties while coding, I kept trying to think more computationally. Through studying basic coding, I have had more interest in the mechanism of computation and hardware of the computer.

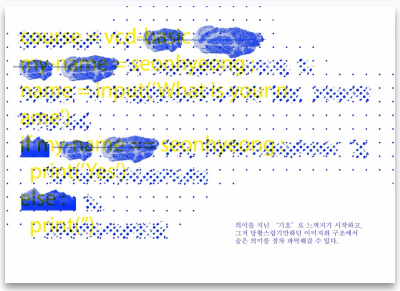
Poster Design

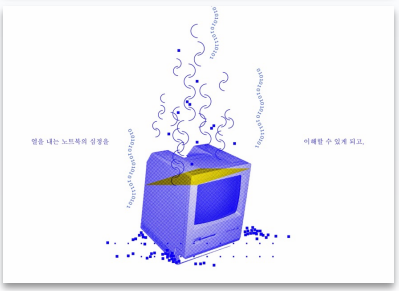


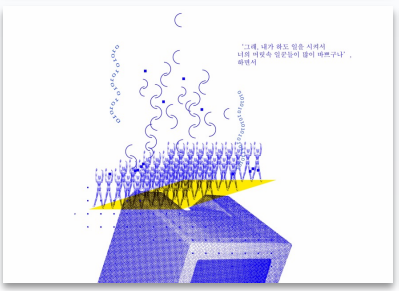


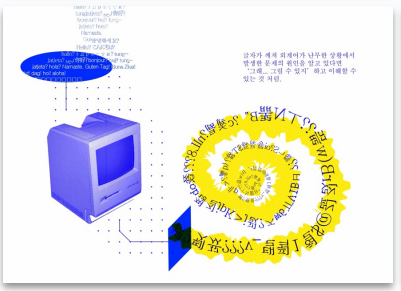


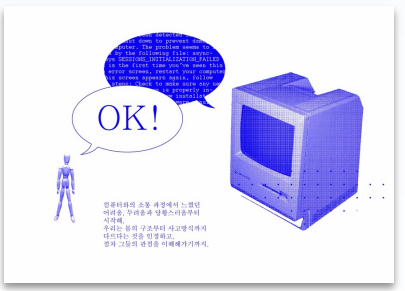












With inspiration from that experience, I created a series of illustrations and developed the idea for the poster. The interest in a computer has continued in the next work, *Computer Communication manual*.
